# **Class GameJPanel**

```
java.lang.Object
    java.awt.Component
    java.awt.Container
    javax.swing.JComponent
    javax.swing.JPanel
    GameJPanel
```

#### All Implemented Interfaces:

```
java.awt.image.ImageObserver, java.awt.MenuContainer, java.io.Serializable,
java.lang.Runnable, javax.accessibility.Accessible
```

```
public class GameJPanel
extends javax.swing.JPanel
implements java.lang.Runnable
```

This class takes out most of our game's gameplay. This class will create the enemys and the player sprite. All of our

# playerName

private java.lang.String playerName

#### round

private int round

## Constructor Detail

#### **GameJPanel**

public GameJPanel()

private String playerName; private List wavesList = new ArrayList<>(); private int round = 0; /\*\* This is the GameJPanel constructor, when created it will load the waves, and run the initGamePanel.

## **Method Detail**

#### intiGamePanel

private void intiGamePanel()

This is the GamePanel initalization, this will set up all the fonts and other options surroung our game such as enemies and player. Then the method will set up some of the JPanel settings.

## paintComponent

public void paintComponent(java.awt.Graphics g)

#### Overrides:

paintComponent in class javax.swing.JComponent

#### run

public void run()

This is our run method for GameJPanel, this will keep track of the framerate and will repaint our images on the canvas.

# Specified by:

run in interface java.lang.Runnable

## loadWave

private void loadWave()

This method will read in the wave.txt and load in the waves for the game. Method will pull the file in and read each line one by one and will break it up into arraylists.
